

TASK 20 – CUSTOMER ORDER COUNT

Data Analytics Internship – Daily Task Report

1. Task Overview

The objective of this task was to count orders for each customer and identify customers with a high number of orders. The analysis was performed using the Superstore dataset in Excel with a PivotTable and a bar chart.

2. Task Objective

- Count orders per customer using Customer ID.
- Identify the Top 10 customers based on order count.
- Sort customers from highest to lowest order frequency.
- Present the results visually using a bar chart.

3. Tools Used

- Microsoft Excel / WPS Spreadsheet
- PivotTable
- PivotChart / Bar Chart

4. Methodology

- Used the Superstore dataset containing Order ID and Customer ID.
- Created a PivotTable with Customer ID in Row Labels.
- Used Order ID in the Values area and summarized it as a count to calculate order frequency.
- Sorted the customer order counts from highest to lowest.
- Filtered the results to show the Top 10 customers.
- Created a horizontal bar chart titled “Top 10 Customers by Order Count”.
- Added key findings beside the chart for easy interpretation.

5. Top 10 Customer Results

Customer ID	Order Count
WB-21850	37
PP-18955	34
MA-17560	34
JL-15835	34
SV-20365	32
JD-15895	32

CK-12205	32
EH-13765	32
AP-10915	31
ZC-21910	31

The PivotTable shown in the completed work also displays a Grand Total of 360 for the listed Top 10 customer results.

6. Key Findings

- The Top 10 customers were identified based on order count.
- WB-21850 had the highest order count in the displayed Top 10, with 37 orders.
- PP-18955, MA-17560, and JL-15835 each had 34 orders.
- Several customers had 32 orders, while AP-10915 and ZC-21910 had 31 orders.
- The bar chart makes differences in customer order frequency easy to compare.

7. Completed Work – Screenshot

The screenshot above shows the completed PivotTable, Top 10 customer bar chart, and key findings.

8. Task Instructions / Reference

The reference screenshot shows the VEDA Technology Task 20 requirements: Customer Order Count, including the description, objective, tools, deliverables, hints, suggested datasets, and interview questions.

9. Conclusion

The Customer Order Count task was completed by grouping customers using Customer ID, counting their orders with a PivotTable, identifying the Top 10 customers, and presenting the result in a bar chart. This provides a simple view of customer order frequency and helps identify frequent buyers.
